Hi, Cecilia. Please see pages 448 – 460 in the attached for a description of the exposure scenarios considered for the dose reconstruction exercise. Also included in this Appendix is the inputs used for modeling of these scenarios.

Please let me know if you have more questions. I'll be here until 4.

Sorry, I am confused. What dose reconstruction thing from Columbia?

All I remembered was the table with different exposure scenarios. Wade, can you remind me what is the exposure scenarios for Columbia?

No, just the dose reconstruction thing using our estimates from Columbia

It will really help if you could email you a table for me to fill. Or can someone confirm the list below?

Ex. 5 - Deliberative Process

Thank you.

And, the model only outputs TCPy amount in urine (no volume information to get concentrations).

Yes, thanks !!!!!

Ps, our discussion with rusty, Elaine, and Tina on Thursday on the op modeling went great. They immediately saw the value in the tiered idea you and I discussed. Will catch you up next week but if you get a minute, it might be useful for you to follow up with them too.

I will start working on it tonight. Will let you know if I encounter any problem.

You want to peak concentrations of parent in blood and TCPy in urine, correct?

Could you have it for Tuesday?

Thx

Hi, Anna,

I got the invites for next Monday and Tuesday's meetings. I have accepted both meetings.

When I ran the simulations for Wade, I only saved the RBC AChE inhibition. I could re-run those simulations to get you urinary TCPy and blood chlorpyrifos over the weekend, but can't guarantee that I can get all done in time for your Monday meeting. Please let me know if you need those results.

Thank you.

Hey Cecilia

I'm close to having the public comments relevant to the modeling compiled for you. plan to send tomorrow.

have you gotten invites for briefings on cpfos on Monday and/or Tuesday? There are multiple briefings of Jim Jones & Tom Burke next on cpfos. Monday is the pre-brief for the hazard/pbpbk/epi issues with Jack & OCHP.

when you & wade conducted the dose reconstruction analysis for the indoor uses from pre-cancellation, did you also get outputs for urinary TCPy and/or blood cpfos? if so, can you send them? I'd like to add in my slides for next week.

thanks

anna
